

# START YOUR ELITE JOURNEY

---

The Next Level Racing® GTElite carries the same industry-leading quality materials, components, finish quality, packaging, ease of assembly, and attention to detail as the F-GT Elite Cockpit and accessories.

The GTElite may be seen as a mid-range or “4080” profile cockpit, however its cutting-edge design\* and engineering through the use of unique components, fixtures, reinforcements, and advanced manufacturing not only results in a cockpit far more rigid than cockpits in its class but also competing w flagship or “16040” cockpits from competitors in rigidity and performance.

**LAUNCH TRAILER**

The Next Level Racing® GTElite is designed and manufactured to be the best value aluminium profile cockpit in the industry for its rigidity, performance, quality, design, and included features. \*Patent pending

“What do I think of it? Well, I love it. In fact, I think it is probably one of the best sim racing products I’ve ever used... If you are in the market for a no compromise, really well built, beautifully designed aluminium profile cockpit, your money will be really well spent here”

**RaceDepartment** Review / F-GT Elite Cockpit

# GROW WITH ELITE!

## STRENGTH & RIGIDITY

Strength and rigidity was a key focus when designing the GTelite. We have not ignored the fundamental and critical requirements of great cockpit function and design.

\*ELECTRONICS NOT INCLUDED

## WHEEL PLATE EDITION

### NLR-E022

---

Patent pending design sets a new benchmark for performance and rigidity for a cockpit of its class

---

Industry leading quality of materials, components, fixtures and packaging

---

Pre-machined holes with through bolts for connections rather than corner brackets for rigidity as well as ease and speed of assembly

---

Market leading inclusions such as gear shifter and handbrake support, 4mm carbon steel flex free seat brackets with endless adjustments, flex free seat sliding system, flex free sliding system pedal plates, Butt kicker adaptor, premium designed NLR feet, end caps, cable management clips, spirit level, and tool holder

---

Fully and easily adjustable wheel, shifter and pedal positions

---

Extensive ecosystem of add-ons and upgradable to Formula cockpit and Next Level Racing motion with available accessories

---

Laser Etched lines for fine tuning during assembly and adjustment.

---

Laser Etched Next Level Racing Logo for a premium finish.

---

## FRONT & SIDE MOUNT EDITION

### NLR-E023

---

Designed for front & side mounting wheels

---

Patent pending design sets a new benchmark for performance and rigidity for a cockpit of its class

---

Industry leading quality of materials, components, fixtures and packaging

---

Pre-machined holes with through bolts for connections rather than corner brackets for rigidity as well as ease and speed of assembly

TAKE RACING TO THE NEXT LEVEL®

WE DIDN'T JUST ENTER THE ALUMINIUM COCKPIT MARKET

# WE SPENT YEARS IN R&D TO TAKE IT TO THE NEXT LEVEL

In terms of meeting expectations and doing the things it says it does, absolutely no problem with it whatsoever. I think it is a very well-designed cockpit and something they have obviously put a lot passion, time, and effort into.... I absolutely have no issue in recommending this cockpit, they have done a really good job of it...

For someone with Design background I can't help but be blown away with how this thing look, Next Level Racing have knocked it out the park with this one this looks absolutely incredible. If we're comparing this to a car, we would be comparing it to something like McLaren or Ferrari it's that level of Finish...

Out of all the rigs I've had and I've had quite a few this is my favourite so this is going to be my everyday driver now, this is going to be my main rig.... this is a lovely premium product...

It was amazing, such a solid build and comfortable seating position and I loved every minute of the drive. It looks great and feels great and it will grow with me as a sim racer with the huge amount of customization that's possible here and honestly I could hardly love it more...

I am tremendously impressed by this, this is by far the best wheel column build that I've ever used on a cockpit to this point. It leads to a sensation when you feel so much more connected to the car...

I have rarely had anything so robust for racing even with very high force feedback from the steering wheel nothing bothers and you got the feeling nothing is giving away so if you are using a pro set-up this is probably the best choice that you can make...
